

NOW HIRING:

Postdoctoral Research Scholar

The EnBiSys Lab is looking for a postdoctoral research scholar to develop data management architectures, decision support dashboards and machine learning models for large-scale plant sciences and agricultural data.

As part of the SweetAPPS Project, this postdoctoral researcher will lead the development of APIs, data workflows and dashboards that will bridge the gap between big data and decision making in agriculture. The goal is to deliver a decision support platform to ag stakeholders that integrates analytics, querying, and data visualization. A successful candidate will be able to work with an interdisciplinary team of land grant university faculty and graduate students, effectively communicate technical knowledge to diverse groups, and successfully mentor graduate students developing machine learning and deep learning models that analyze and extract insights from data. Individuals with knowledge of tools for handling big data, cloud computing platforms, databases and data workflows are encouraged to apply.
